

CENTRALIZED PROTECTION OF CONFIDENTIAL DATA FOR ANDROID DEVICES

The solution: Endpoint Protection Plus for Android

Endpoint Protection Plus allows organizations to centrally maintain the **security and confidentiality of the data stored** in the company’s Android smartphones and tablets. **Endpoint Protection Plus** does not require specific technical knowledge or dedicated on-premise security servers. Additionally, the solution provides tools available anytime anywhere **to protect mobile devices against malware, theft and loss.**

What includes?

Centralized management

Manage your Android tablets and smartphones **from the cloud via a single Web-based console.**

Antivirus protection

Enjoy permanent anti-malware protection for your mobile devices. Run immediate, periodic or scheduled scans from the Web console, or perform on-demand scans from protected devices.

Remote lock

Protect your data against unauthorized access to lost or stolen devices, or prevent former employees from accessing corporate data.

Remote wipe

Restore devices to their factory settings and wipe **any sensitive information they may contain.**

Geolocation

Track and map the location of stolen or lost devices.

Snap the Thief

Use the device’s camera **to take a snapshot of the potential thief** and email it to the address of your choice.

Consolidated reports

Integrate all generated reports into a single platform for data mining.
